

9 July 2023

Dear team,

I am a Research Data Scientist in "GEUS"/ marketing Data analyst at "Clu" and Coming off an enlightening Business data analyst career and MBA candidate at Liverpool Business School, and after reading the job brief I am very interested in the opportunity for Data Scientist position at BrideBook..

.

As a Computer science/ Data Science master's student Specialized in Cloud Computing and Machine Learning and furthermore data analyst, I have developed and tweaked my ML, AI, informatics, data science, statistical analysis, and forecasting skills. I consider myself to be the ideal candidate for the Data Analytics department at BrideBook..

.

At present I am a data science student researcher at GEUS working one of NASA's project of the Greenland ice sheet project, The Greenland Ice Sheet has been losing mass continuously since the 1990s due to anthropogenic climate change, so the project involves building new SumUp Data sets so climate scientists and ice sheet modelers can improve their simulations of current and future ice sheets and sea ice response to climate change. So the project is mainly data extraction and production for Meta Data and Data quant and spatial Temporal Analysis and real-time analysis visualization.

In addition to the above, I am currently at CLU Working on software development and data and website analytics with depth on google analytics. In addition to researching Modeling and deploying new machine learning algorithms for business development and increasing user experience functionality after software development I was assigned an ML project. As a former business data analyst at Mera trade for almost 3 years, I have worked on many small- and large-scale projects which allowed me to expand my data toolset and knowledge. That experience, coupled with my university AI and Robotics background as a researcher, equipped me with a great understanding of the ins and outs of data, including systems analysis, business practices, database management systems, emerging technologies, business trends, and AI/ML project management.

I take great pride in the results I have achieved as a neurodiverse person with multiple disabilities; thus far, whether it's data entry or complicated calculations, data cleaning, forecasting and Visualization as such consider myself the ideal candidate for the Data Scientist position in BrideBook.

.

Sincerely yours,
Ahmed Adel
